

Hello Wonderful Zeno Partners!

It is our goal to continue to spark joy and inspire a love of math. Families can engage their children in each math concept before they even receive their games! Let's explore the math concept of Patterning.

Patterning Activities

- When getting dressed, describe patterns on your clothing. For example say, "I am wearing a pattern on my shirt. The stripes go: white, black, white, black, white, black..."
- When listening to music with your child, point out the repeating rhythm. For example say, "I hear a pattern in this song, it goes: drum, drum, ding, drum, drum, ding..."
- When your child is stacking blocks, describe a pattern they made. For example say, "You made a pattern tower! It goes: red, blue, red, blue..."
- When your child is dancing, describe the patterns they make with their movements. For example say, "You are moving in a pattern by swinging your hips left, then right, then left, then right, ..."
- During meals, see if your child can make a pattern with their food. For example: cracker, cracker, cheese, cracker, cracker, cheese, etc.
- When playing "I-Spy a Pattern" with your child. Go on a hunt for patterns that they see throughout their day. Describe a pattern you see to your child and see if they can find the pattern too!
- Start a sound pattern by using different sounds to create a pattern. For example: clap, clap, snap, clap, clap, snap, etc. See if your child can continue the pattern.

Book Recommendation
